Stäubli – The long term shaper of the Swiss machinery landscape

December 9, 2020 marks the 80th anniversary date of the Swissmem Textile Machinery Division. Stäubli, a member of Swissmem since January 1897, was among the founders of this section, dedicated to the textile industry.

Today the Stäubli Group, enjoys worldwide recognition as an innovation driver in textile mechatronics. The innovation gene dates back to 1892 and is abundantly evident today in the 500-some R&D engineers working in the Group to invent, redesign or improve Stäubli mechatronics solutions and thereby bring further benefits to Stäubli customers.

Invention and technology, robust high-quality construction, comprehensive services, and spare parts availability even years after delivery make Stäubli solutions an essential part of modern weaving mill operations around the world. The company sets worldwide standards in the weaving industry.

Prime examples are Active Warp Control (AWC) and Initial Condition Settings (ICS), applied in the company’s SAFIR automatic drawing-in machines.

The Swissmem Textile Machinery Division will celebrate its next future milestone in 2030, at which time we will certainly look back on 2020, a year that will mark history books due to the pandemic which has devastated individuals and businesses around the world. The Stäubli Group is determined to meet the challenge by providing flexible and reliable solutions for long-term use and to provide modern and market-oriented solutions for the textile industry for sustainability.
